

# Streaming from T9261-E to Twitch

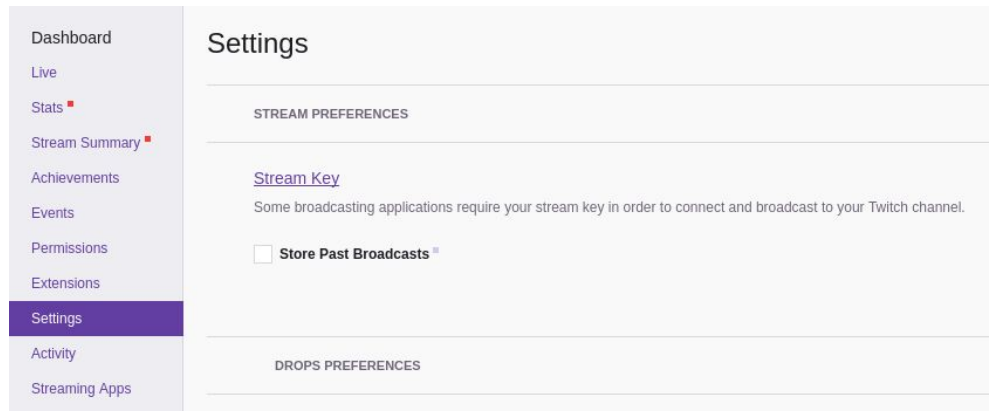

Start with a valid SDI source connection. This is indicated by the blue box displaying “ENCODING” and a moving bitrate graph in the header.

Sign in to **Twitch** and click on your username. Then click on **Dashboard**.

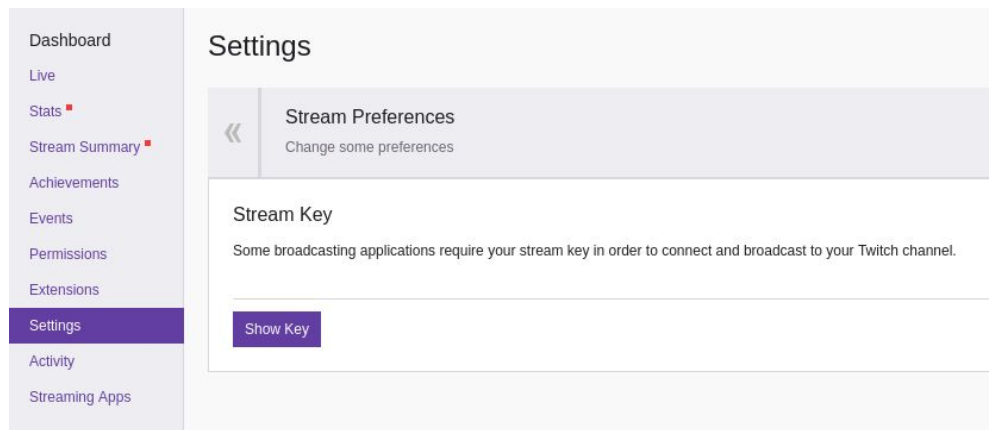

# Streaming from T9261-E to Twitch

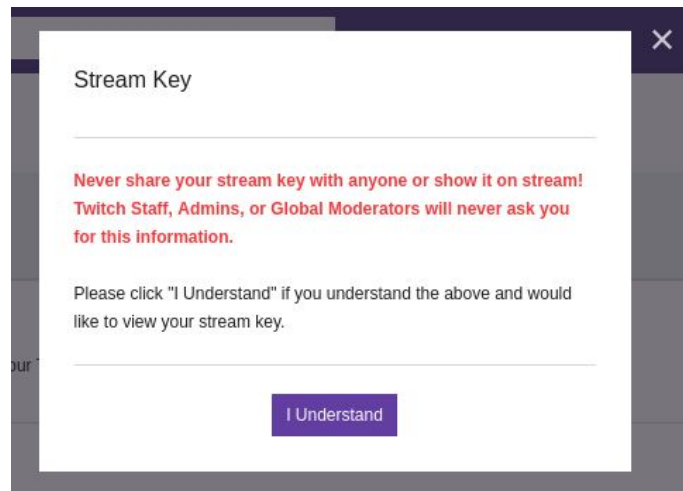

In the new window that opens up click on the **Settings** link on the left. Click on the **Stream Key** link.

Click on **Show Key** to open the modal.

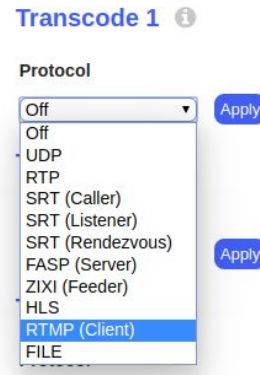

Click **I Understand** to see your key. It's important not to share it, otherwise you are exposed to someone hijacking your channel.

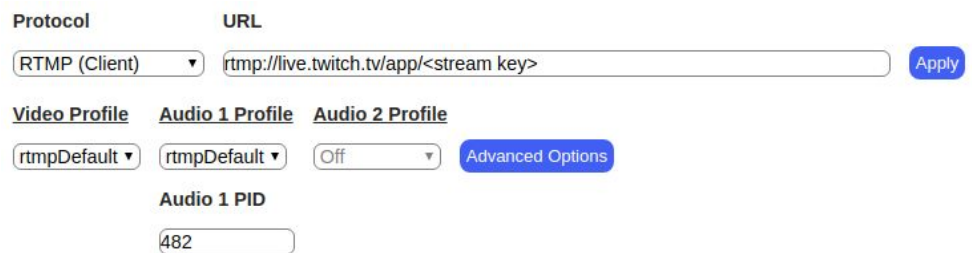

# Streaming from T9261-E to Twitch

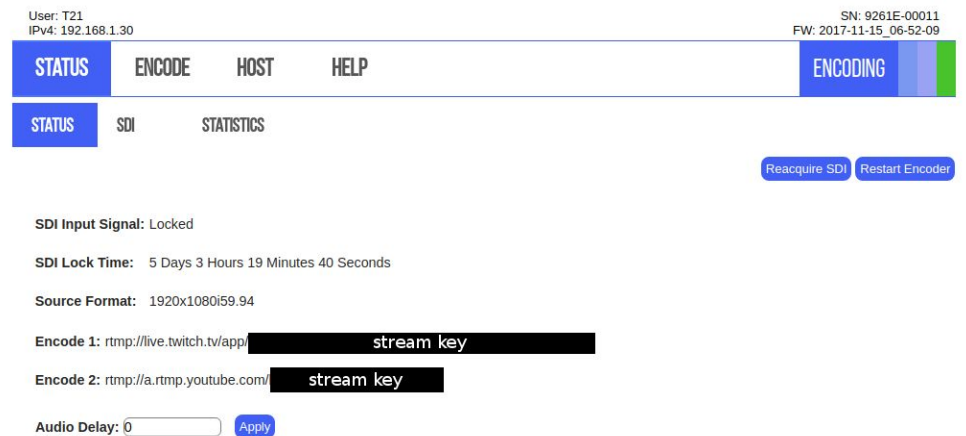

On the user interface go to the **Transcode** tab and select **RTMP (Client)** from the **Protocol** dropdown.

In the **URL** field follow this format: `rtmp://live.twitch.tv/app/<stream key>`  
Use the key you got from **Twitch**.  
Then click **Apply**.

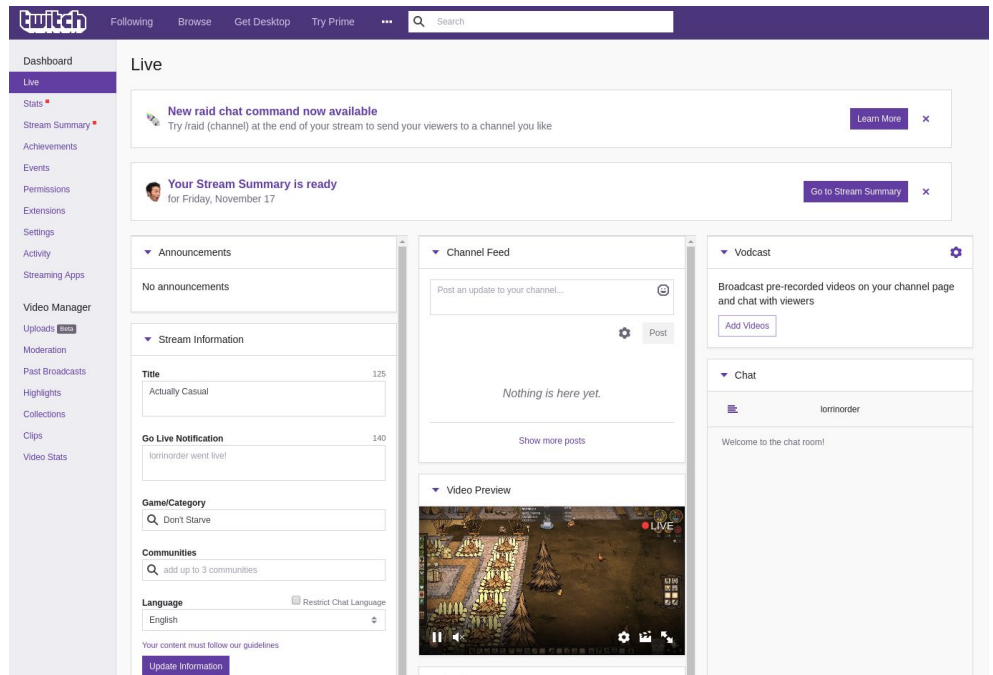

The **Encode** path will be visible on the **Status** tab and a blinking box will appear in the header.

# Streaming from T9261-E to Twitch

Back on your **Twitch Dashboard** Page go to the **Live** link in the menu and the video from the T9261-E should be playing.

To stop the stream, select **Off** from the **Protocol** list on the T21 device and click **Apply**.

The video on your **Twitch** channel should change to **Offline**.
